

CHROMATOGRAPHY METHODS AND CHROMATOGRAPHY APPARATUSABSTRACT

5           Ultrasound transceivers (20) are distributed up the  
side wall of a chromatography column (1) and enable  
tracking of the progress of a rising bed front (5) during  
packing. Comparison with a predetermined stored profile  
is used for feedback control of the packing pump P.  
10   Other uses of ultrasound monitoring of the column  
interior are disclosed.
